

Diego Felix Amachi Flores

Software Engineer

[e-mail](#) | [Portfolio-OS](#) | [GitHub-Account](#) | Lima, Perú

PROFILE

Software Engineer specializing in scalable backend systems and modern web applications, with extensive experience developing solutions using Node.js, TypeScript, and React alongside relational databases such as PostgreSQL, MySQL, and SQLite. My work centers on automating business processes through AI-powered solutions for small enterprises, combining backend engineering with user-focused application design. I have experience integrating large language models, optimizing context management and token efficiency, and building reliable development workflows with Git, LazyGit, and Arch Linux.

SKILLS

Languages: TypeScript, JavaScript, Rust, Java, SQL | **Backend:** Node.js, Express, REST APIs | **Frontend:** React, Vite, HTML/CSS | **Databases:** PostgreSQL, MySQL, SQLite | **Tools:** Git, LazyGit, Arch Linux | **AI:** LLM Integration, Context Engineering, AI-assisted Development.

PROJECTS

ContabIA – TypeScript, AI

ContabIA is an AI-powered multi-tenant SaaS platform designed for accounting workflows in micro and small businesses. Originally conceived as a manual invoice registration system, it evolved into a vertical AI solution that automates currency conversion, generates tax recommendations, and is being extended with voice-driven invoice issuance capabilities, all built around a TypeScript-based architecture.

ExpensIA – TypeScript, AI, pgvector

An AI-powered expense classification platform that leverages Retrieval-Augmented Generation (RAG) over scanned invoices and receipts to improve financial document processing. The system combines hybrid search retrieval with pgvector embeddings, automated categorization, citation-grounded responses, and an evaluation dashboard backed by a production-grade observability framework.

Portfolio-Desktop Simulator – React, TypeScript, sql.js, Vite

A browser-based desktop environment that recreates the experience of a traditional operating system through draggable icons, resizable windows, an in-browser SQLite database, integrated terminal, file editor, theme customization, and dev.to blog connectivity. Developed with React, TypeScript, Vite, and sql.js to showcase advanced frontend architecture and state management.
